Kleerr Subprocessors

Last updated: October 3, 2025

Contact: privacy@kleerr.com

Kleerr engages the third-party Subprocessors listed below to support delivery of the Services. Each Subprocessor is bound by written data-processing terms. Kleerr remains responsible for their performance.

Customer Data processed by or through these providers is not used to train generalized or third-party AI/ML models.

How we use Subprocessors

- Scope: Infrastructure hosting, security/CDN, front-end hosting/caching, payments processing, transactional email delivery, and AI model invocation.
- Safeguards: Encryption in transit/at rest where applicable, least-privilege access, logging/monitoring, and contractual confidentiality.
- Change notifications: We update this page for material changes. If your DPA provides an objection right, we'll notify the Customer admin via email 30 days before a change where feasible.

Entity	Purpose/Role	Data Categories Processed	Processing Location(s)
Amazon Web Services, Inc.	Cloud infrastructure (compute, storage, networking); managed platform services	Customer Data (as configured), and Service Data (operational logs/metrics)	United States (primary)
Cloudflare, Inc.	Content delivery and security (CDN, DDoS/WAF, edge proxy)	Network telemetry (IP addresses, headers, request metadata) and cached content as configured	Global edge network with primary processing in the United States

Vercel Inc.	Application hosting and content delivery	Rendered application assets and responses; limited request metadata	United States (primary) with global edge delivery
Stripe, Inc.	Payment processing and subscription billing	Account/billing identifiers, payment tokens, transaction metadata	United States (primary) with global processing as needed for payment routing
Brevo (Sendinblue)	Transactional email delivery	Recipient identifiers and message metadata/content for service communications	European Union (primary) with global email delivery
Render, Inc.	Managed hosting for selected third-party integrations	Integration metadata and Customer Data processed by the enabled integration as configured by Customer	United States (primary)

Definitions

Customer Data: Data submitted to or collected by the Services on Customer's behalf (e.g., event/attribution data, identifiers).

Service Data: Operational data generated by the Services (e.g., logs, metrics).

Subscription to changes

To receive Subprocessor change notifications, email privacy@kleerr.com with subject "Subscribe to Subprocessor updates," and include your company name and admin contact.

This page reflects current usage. Historic updates and removals are tracked below.
